Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-27 and 45-67, drawn to a photomask, classified in class 430, subclass 5.
- II. Claims 28-44, drawn to patterned semiconductor, classified in class 430, subclass 311.
- III. Claims 68-75, drawn to method of using a mask to form pillars, classified in class 438, subclass 257.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II, III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product could be used to make a materially different product such as one wherein the masked features comprise a nonprinting window that is not enclosed within a perimeter of each masked feature.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are to patterned features on a semiconductor device and to a structure comprising pillars.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and their recognized divergent subject matter restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
